Introductory Note

THE little book reproduced on the succeeding pages is the account, by one of the men of the expedition, of the first voyage of Englishmen to the shores of New England. Captain Gosnold and thirty-two others set sail from Falmouth on Friday, March 26, 1602, and made their first landing on Cape Cod, which they so named on account of the great abundance of fish found there. This was the first English name given to any part of the New England coast. They also discovered and named the Island of Martha's Vineyard. The small number in the party made the establishment of a colony impossible, and no extensive explorations were undertaken. They set out on their return on June 18, again on a Friday, and arrived safely in the harbor of Exmouth on July 23. This hasty voyage was the true beginning of New England.

Captain Gosnold was afterwards second in command in the little fleet which set sail for Virginia on December 20, 1606, under Captain Christopher Newport, and was a member of "His Majestie's Counsel of His First Colony in Virginia." He died there on August 22, 1607.

Brereton, the author of the narrative, may have held some minor office, at least he was one of the five men in the first boat which landed on Cape Cod. "Captain Bartholomew Gosnold, my selfe, and three others, went ashore," is the way he describes (on page 4) the landing of the first Englishmen on the shores of New England. Little or nothing is known of his after history, unless he be the same John Brereton who was convicted of manslaughter and

Introductory Note

pardoned in 1611, or the John Brereton who sought a license to keep an inn in Chester in 1613.

On page 14 is a little note of the fruitless voyage of Captain Samuel Mace, the same year, to Virginia by Raleigh's orders, to search for the lost colony at Roanoke. The "larger discourse" seems never to have "come to light," and but little is known of the voyage.

Captain Edward Hayes, the author of the "Treatise," described on the title, and which fills pages 15 to 24, was not, apparently, of the party, though he had himself been one of the pioneers in American colonization, having commanded the *Golden Hinde*, the companion to Sir Humphrey Gilbert's ill-fated ship, in the expedition to Newfoundland in 1583.

Two editions of the *Relation* were published in 1602. Of the first, which is the one reproduced, only three copies seem to be known. One was in the library of the late Lord Chancellor Hardwicke, being bound in with eleven other rare tracts, mostly relating to America. When his library was dispersed at Christie's in 1888, the volume brought £555. The Brereton from the collection is now in the John Carter-Brown Library in Providence. The second, from which our reproduction is made, belongs to Mr. E. D. Church, of New York. The third, which lacks title-page, is owned in England.

This first edition contains 24 pages only. The second has 48 pages and has the additional lines on the title-page: "With diuers instructions of speciall moment/ newly added in this second im-/pression." Of this second issue four copies can be traced in this country:

1. The fine Isham copy, entirely uncut, bought by Quaritch in the Isham sale in 1886 for £265. This afterwards belonged to the late Mr. Charles H. Kalbfleisch and to Mr. M. C. Lefferts. It now belongs to Mr. E. D. Church.

2. The Brinley copy, bought in that sale by Mr. Kalbfleisch, who, after the Isham sale, sold it to Messrs. Dodd,

Introductory Note

Mead & Co., from whose hands it passed into Mr. Church's collection. Since Mr. Church has secured the Isham-Kalbfleisch-Lefferts copy, the Brinley-Kalbfleisch copy has in turn gone to Mr. E. E. Ayer, of Chicago.

3. The Barlow copy, which at that sale in 1890 brought \$1,125 and is now in the New York Public Library, Lenox Collection.

4. A copy in the John Carter-Brown Library in Providence.

There are three copies of the second edition in the British Museum, one, in the Grenville collection, very imperfect.

A
Briefe and true Relation of
the Discouerie of the North
part of *Virginia*; being a
most pleant, fruitfull
and commodious
soile:

Made this present yeere 1602, by
Captaine *Bartholomew Gosnold*, Cap-
taine *Bartholomew Gilbert*, and diuers
other gentlemen their associates, by the
permission of the honourable knight,
SIR WALTER RALEGH, &c.

Written by M. Iohn Brereton
one of the voy.ige.

Wherunto is annexed a Treatise,
conceining important inducements for
the planting in those parts, and
finding a passage that way
to the South sea;
and *China*.

Written by M. Edward Hayes, a gentleman
long since imployed in the like action.

LONDINI,
Impensis Geor. Bishop.
1602.

To the honourable, Sir WALTER
 RALEGH, Knight, Captaine of her
 Maiesties Guards, Lord Warden of the
 Stanneries, Lieutenant of *Cornwall*, and
 Governour of the Ile
 of *Iersey*.

Honourable sir, being earnestly requested by a déere friend, to put downe in writing, some true relation of our late perfoꝛmed voyage to the South parts of Virginia; at length I resolved to satisfie his request, who also imboldened me, to direct the same to your honourable consideration; to whom indeed of duetie it pertaineth.

May it please your Lordship therefore to vnderstand, that vpon the five and twentieth of March 1602, being Friday, we went from Falmouth, being in all, two & thirtie persons, in a small barke of Dartmouth, called The Concord, holding a course for the South part of Virginia: and although by chance the winde fauoured vs not at first as we wished, but inforced vs so farre to the Southward, as we fell with S. Marie, one of the islands of the Açores (which was not much out of our way) yet holding our course directly from thence, we made our iourney shorter (than hitherto accustomed) by the better part of a thousand leagues, yet were we longer in our passage than we expected; which happened, for that our barke being weake, we were loth to presse her with much saile; also, our sailers being few, and they none of the best, we bare (except in faire weather) but low saile; besides, our going vpon an vnknown coast, made vs not ouer-holde to

They fell with
 S. Marie, one of
 the Açores.

stand in with the shoze, but in open weather; which caused vs to be certeine daies in sounding, befoze we discovered the coast, the weather being by chance, somewhat foggie. But on Friday the foureteenth of May, early in the morning, we made the land, being full of faire trees, the land somewhat low, certeine hummocks or hilles lying into the land, the shoze full of white sand, but very stony or rocky. And standing faire alongst by the shoze, about twelue of the clocke the same day, we came to an anker, where fire Indians, in a Wastke-shallop with mast and saile, an iron grapple; and a kettle of copper, came boldly aboard vs, one of them apparelled with a wastcoat and byatches of blacke serdge, made after our sea-fashion, hose and shoes on his feet; all the rest (sauing one that had a paire of byatches of blue cloth) were all naked. These people are of tall stature, broad and grim visage, of a blacke swart complexion, their eie-browes painted white; their weapons are bowes and arrowes: it seemed by some words and signes they made, that some Waskas or of S. Iohn de Luz, haue fished or traded in this place, being in the latitude of 43 degrees. But riding here, in no very good harbour, and with all, doubting the weather, about thze of the clocke the same day in the afternoon we weighed, & standing Southerly off into sea the rest of that day and the night following, with a fresh gale of winde, in the morning we found our selues embayed with a mightie headland; but coming to an anker about nine of the clocke the same day, within a league of the shoze, we hoised out the one halfe of our shallop, and captaine Bartholmew Gosnold, my selfe, and thze others, went ashoze, being a white sandie and very bolde shoze; and marching all that afternoon with our muskets on our necks, on the highest hilles which we saw (the weather very hot) at length we perceived this headland to be parcell of the maine, and sundrie Islands lying almost round about it: so returning (towards euening) to our shallop (soz by that time, the other part was brought ashoze and set together) we espied an Indian, a yong man, of proper stature, and of a pleasing countenance; and after some familiaritie with him, we left him at the sea side, and returned to our ship, where, in five or sixe houres absence, we had pestered our ship so with Cod fish, that we thzeew numbers

They discouered land the 14. of May.

The description of them.

Their first landing.

Another Indian.

An excellent Cod fishing.

bers of them ouer-board againe : and surely , I am persua-
 ded that in the moneths of March, April, and May, there is
 vpon this coast, better fishing, and in as great plentie, as in
 Newfound-land : for the sculles of Hakerell, herrings, Cod,
 and other fish, that we dayly saw as we went and came from
 the shoze, were wonderfull ; and besides, the places where
 we toke these Cods (and might in a few daies haue laden our
 ship) were but in seuen faddome water, and within lesse than
 a league of the shoze ; where, in Newfound-land they fish in
 fortye or fiftie fadome water, and farre off. From this place,
 we sailed round about this headland, almost all the points of
 the compasse, the shoze very bolde : but as no coast is free from
 dangers, so I am perswaded, this is as free as any ; the land
 somewhat lowe, full of goodly woods, but in some places plaine:
 at length we were come amongst many faire Ilands, which
 we had partly discerned at our first landing ; all lying within
 a league or two one of another, and the outermost not about
 five or seuen leagues from the maine : but coming to an an-
 ker vnder one of the, which was about thre or foure leagues
 from the maine, captaine Gosnold, my selfe, and some others,
 went ashoze, & going round about it, we found it to be foure
 English miles in compasse, without house or inhabitant, sa-
 uing a little old house made of boughes, couered with barke,
 an olde piece of a weare of the Indians, to catch fish, and one
 or two places, where they had made fires. The chiefest trees
 of this Iland, are Waches and Cedars ; the outward parts
 all ouergrown with lowe bushie trees, thre or foure foot in
 height, which beare some kinde of fruits, as appeared by
 their blossomes ; Strawberies, red and white, as swæt and
 much bigger than ours in England, Kalberies, Goleberies,
 Hurtleberies, and surh ; an incredible shoze of Vines, as well
 in the wooddie part of the Iland, where they run vpon euery
 tree, as on the outward parts, that we could not goe for trea-
 ding vpon them : also, many springs of excellent swæt water,
 and a great standing lake of fresh water, nere the sea side, an
 English mile in compasse, which is maintained with the
 springs running exceeding pleasantly throow the wooddie
 grounds which are very rockie. Here are also in this Iland,
 great shoze of Deere, which we saw, and other beasts, as ap-
 peared

peared by their tracks; as also diuers fowles, as Cranes, Herrings, Witters, Geese, Hallards, Teales, and other fowles, in great plenty; also, great Hoze of Pease, which grow in certeine plots all the Island ouer. On the South side of this Island we found many huge bones and ribbes of Whales. This Island, as also all the rest of these Islands, are full of all sorts of Stones fit for building; the sea sides all covered with Stones, many of them glistering and shining like minerall Stones, and very rockie: also, the rest of these Islands are replenished with these commodities, and vpon some of them, inhabitants; as vpon an Island to the Southward, and within two leagues of this; yet we found no townes, nor many of their houses, although we saw manie Indians, which are tall big boned men, all naked, sauing they couer their priuy parts with a blacke tewed skin, much like a Black-Smithes apron, tied about their middle and betwene their legs behinde: they gaue vs of their fish readie boiled (which they carried in a basket made of twiggess, not unlike our ossier) whereof we did eat, and iudged them to be fresh

Tabacco.

water fish: they gaue vs also of their Tabacco, which they drinke greene, but dried into powder, very strong and pleasant, and much better than any I haue tasted in England: the necks of their pipes are made of clay hard dried (whereof in that Island is great Hoze both red and white) the other part, is a peece of hollow copper, very finely closed and segmented together: we gaue vnto them certeine trifles, as kniues, points, and such like, which they much esteemed. From hence

Elizabeths
Island.

we went to another Island, to the Southwest of this, and within a league or two of the maine, which we found to be greater than befoze we imagined, being 16 English miles at the least in compasse; for it containeth many peece or necks of land, which differ nothing from severall Islands, sauing that certeine banks of small bredth do like byldges ioyne them to this Island: on the outides of this Island are many plaine places of grassie, abundance of Strawberies & other berries

Wheat, Bar-
ley, and Dats
sowed, came

in foureteene
dayes.

befoze mentioned: in mid May we did sowe in this Island (as for a triall) in sundry places, Wheat, Barley, Dats, and Pease, which in foureteene daies were sprung vp nine inches and moze: the soile is fat and lustie; the upper crust, of gray colour.

colour; but a foot or lesse in depth, of the colour of our heme-lands in England; and being thus apt for these and the like graines; the sowing or setting (after the ground is cleaned) is no greater labour, than if you should set or sowe in one of our best prepared gardens in England. This Island is full of high timbered Oaks, their leaves thise so broad as ours; Cedars, Strait and tall; Beech, Elme, Hollie, Walnut trees in abundance, the fruit as bigge as ours, as appeared by those we found vnder the trees, which had lien all the yere vngathered; Walenut trees, Cherry trees, the leafe, barke and biggnesse not differing from ours in England, but the skalle beareth the blossomes or fruit at the end thereof, like a cluster of Oranges, forty or fifty in a bunch; Sassafras trees great plenty all the Island ouer, a tree of high price and profit; also, diuers other fruit trees, some of them with strange barks, of an Orange colour, in feeling soft and smooth like Melict: in the thickest parts of these woods, you may see a furlong or more round about. On the North-west side of this Island, nere to the sea side, is a standing Lake of fresh water, almost three English miles in compasse, in the middelt whereof stands a plot of wooddie ground, an acre in quantitie or not aboue: this Lake is full of small Toztoises, and exceedingly frequented with all sorts of fowles befoze rehearsed, which breed, some lowe on the banks, and others on lowe trees about this Lake in great abundance, whose yong ones of all sorts we toke and eat at our pleasure; but all these fowles are much bigger than ours in England. Also, in euery Island, and almost in euery part of euery Island, are great store of Ground nuts, sortie together on a string, some of them as bigge as hennes egges; they grow not two inches vnder ground: the which nuts we found to be as good as Potatoes. Also, diuers sorts of shell-fish, as Scallops, Pulletes, Cockles, Lobsters, Crabs, Mussels, and Milks, exceeding good and very great. But not to cloy you with particular rehearfall of such things as God & Nature hath bestowed on these places, in comparison wherof, the most fertile part of al England is (of it selfe) but barren; we went in our light-hoysman frō this Island to the maine, right against this Island some two leagues off, where coming a thoze, we stod a white like men rauished at the

beautie and delicacie of this sweet soile; for besides diuers
clear Lakes of fresh water (whereof we saw no end) Pe-
dowes very large and full of græne grasse; euen the most
woody places (I speake onely of such as I saw) doe grow so
distinct and apart, one tree from another, vpon græne grassie
ground, somewhat higher than the Plaines, as if Nature
would shew herselfe aboue her power, artificiall. Ward by,
we espied seuen Indians; and comming by to them, at first
they expressed some feare; but being emboldned by our cour-
teous blage, and some trifles which we gaue them, they fol-
lowed vs to a necke of land, which we imagined had bene se-
uered from the maine; but finding it otherwise, we perceined
a broad harbour or riuers mouth, which ranne by into the
maine: but because the day was farre spent, we were forced
to returne to the Island from whence we came, leauing the
discouerie of this harbour, for a time of better leasure: of the
goodnesse of which harbour, as also of many others therea-
bouts, there is small doubt, considering that all the Islands,
as also the maine (where we were) is all rockie grounds and
broken lands. Now the next day, we determined to fortifie
our selues in the little plot of ground in the midst of the Lake
about mentioned, where we built an house, and couered it
with sedge, which grew about this lake in great abundance;
in building whereof, we spent thre weeks and moze: but the
second day after our comming from the maine, we espied 9
canowes or boats, with fittie Indians in them, comming
toward vs from this part of the maine, where we, two daies
before, landed; and being loth they should discover our fortifi-
cation, we went out on the sea side to meet them; and com-
ming somewhat nere them, they all sat downe vpon the
stones, calling aloud to vs (as we rightly ghesed) to doe the
like, a little distance from them: hauing sat a while in this or-
der, captaine Gosnold willed me to go vnto them, to see what
countenance they would make; but as soon as I came by vn-
to them, one of them, to whom I had giuen a knife two daies
before in the maine, knew me (whom I also very wel remem-
bred) and smiling vpon me, spake some what vnto their lord
or captaine, which sat in the midst of them, who presently rose
up and toke a large Beauer skin from one that stood about
him

him, and gaue it vnto me, which I requited for that time the best I could : but I pointing towards captaine Gosnold, made signes vnto him, that he was our captaine, and desirous to be his friend, and enter league with him, which (as I perceiued) he vnderstood, and made signes of ioy : whereupon captaine Gosnold with the rest of his companie, being twentie in all, came by vnto them ; and after many signes of gratulations (captaine Gosnold presenting their *L.* with certeine trifles which they wondred at, and highly esteemed) we became very great friends, and sent for meat aboord our Gallop, and gaue them such meats as we had then readie dressed, whereof they mistaked nothing but our mustard, whereat they made many a lowze face. While we were thus merry, one of them had conueied a target of ours into one of their canowes, which we suffered, onely to trie whether they were in subiection to this *L.* to whom we made signes (by shewing him another of the same likenesse, and pointing to the canow) what one of his companie had done: who suddenly exprest some feare, and speaking angerly to one about him (as we perceiued by his countenance) caused it presently to be brought backe againe. So the rest of the day we spent in trading with them for Furres, which are Beavers, Luzernes, Martens, Otters, Wild-cat skinnes very large and deepe furre, blacke Foxes, Conie skinnes, of the colour of our Hares, but somewhat lesse, Dære skinnes very large, Seale skinnes, and other beasts skinnes, to vs vnknoen. They haue also great stoze of Coppet, some very redde, and some of a paler colour ; none of them but haue chaines, earrings or collars of this mettall : they haue some of their arrows herewith, much like our broad arrow heads, very woorkmanly made. Their chaines are many hollow pieces semented together, ech piece of the bignesse of one of our reeds, a finger in length, ten or twelue of them together on a string, which they weare about their necks : their collars they weare about their bodies like bandchieres a handfull broad, all hollow pieces, like the other, but somewhat shorter, foure hundred pieces in a collar, very fine and euently set together. Besides these, they haue large drinking cups, made like sculles, and other thinne plates of Copper, made

much like our boare-speare blades, all which they so little esteeme, as they offered their fairest collars or chaines, for a knife or such like trifle, but we seemed little to regard it; yet I was desirous to vnderstand where they had such store of this mettall, and made signes to one of them (with whom I was verie familiar) who taking a piece of Copper in his hand, made a hole with his finger in the ground, and withall, pointed to the maine from whence they came. They strike fire in this maner; every one carrieth about him in a purse of sewed leather, a Minerall Stone (which I take to be their Copper) and with a flat Emerie Stone (wherewith Glasiers cut glasse, and Cutlers glasse blades) tied fast to the end of a little sticke, gently he striketh vpon the Minerall Stone, and within a stroke or two, a sparke falleth vpon a piece of Touchwood (much like our Spunge in England) and with the least sparke he maketh a fire presently. We had also of their flaxe, wherewith they make many strings and cords, but it is not so bright of colour as ours in England: I am perswaded they haue great store growing vpon the maine, as also Mines and many other rich commodities, which we, wanting both time and meanes, could not possibly discover. Thus they continued with vs thzee daies, every night retiring themselves to the furthestmost part of our Island two or thzee miles from our fort: but the fourth day they returned to the maine, pointing five or six times to the Sun, and once to the maine, which we vnderstood, that within five or six daies they would come from the maine to vs againe: but being in their canoes a little from the shore, they made huge cries & shouts of ioy vnto vs; and we with our trumpet and cornet, and casting by our cappes into the aire, made them the best farewell we could: yet five or seuen of them remained with vs behinde, bearing vs company every day into the woods, and helpt vs to cut and carie our Sassafras, and some of them lay aboord our ship. These people, as they are exceeding courteous, gentle of disposition, and well conditioned, excellling all others that we haue sene; so for shape of bodie and louely fauour, I thinke they excell all the people of America; of stature much higher than we; of complexion or colour, much like a darke Olive; their eye-browes and haire blacke, which they

swear

weare long, tied vp behinde in knots, whereon they prick feathers of fowles, in fashion of a crownet: some of them are blacke thin bearded; they make beards of the haire of beasts: and one of them offered a beard of their making to one of our sailers, for his that grew on his face, which because it was of a red colour, they iudged to be none of his owne. They are quicke eied, and stedfast in their looks, fearelesse of others harmes, as intending none themselves; some of the meaner sort giuen to filching, which the very name of *Saluages* (not weighing their ignorance in good or euill) may easily excuse: their garments are of *Dære* skins, and some of them weare Their apparell. *Furres* round and close about their necks. They pronounce our language with great facilitie; for one of them one day sitting by me, upon occasion I spake smiling to him these words: How now (*sirha*) are you so fancie with my *Tabacco*? which words (without any further repetition) he suddenly spake so plaine and distinctly, as if he had bene a long scholar in the language. Many other such trials we had, which are here needlesse to repeat. Their women. Their women (such as we saw) which were but three in all, were but lowe of stature, their eye-browes, haire, apparell, and maner of wearing, like to the men, fat, and very well faouered, and much delighted in our companie; the men are very dutifull towards them. And truely, the holsonesse and temperature of this *Climat*, doth not onely argue this people to be answerable to this description, but also of a perfect constitution of body, actiue, strong, healthfull, and very wittie, as the sundry toles of their cunningly wrought, may easily witnes. The goodnesse of the Climat. For the agreeing of this *Climat* with vs (I speake of my selfe, & so I may iustly do for the rest of our companie) that we found our health & strength all the while we remained there, so to reuew and increase, as notwithstanding our diet and lodging was none of the best, yet not one of our companie (God be thanked) felt the least grudging or inclination to any disease or sickness, but were much fatter and in better health than when we went out of England. But after our barke had taken in so much *Sassafras*, *Cedar*, *Furres*, *Skinnes*, and other commodities, as were thought conuenient; some of our companie that had promised captaine *Gosnold* to stay, hauing nothing but a sa-
ming

A true relation of the discouerie

uing boyage in their minds, made our company of inhabitants (which was small enough befoze) much smaller; so as captaine Gosnold seeing his whole strength to consist but of twelue men, and they but meanly prouided, determined to *Their returne.* returne for England, leaving this Island (which he called Elizabeths Island) with as many true sorrowfull eyes, as were befoze desirous to see it. So the 18. of June, being Friday, we weighed, and with indifferent faire winde and weather came to anker the 23. of July, being also Friday (in all, bare five weeks) befoze Exmouth.

Your Lordships to command,
John Brereton.

A briefe Note of such commodities as we saw
*in the countrey notwithstanding our small
time of stay.*

Trees.

Emerie stones for Glasiers & Cutlers.

Alabaster very white.

Stones glistering and shining like Minerall stones,

Stones of a blue mettalline colour, which we take to be Steele oare.

Stones of all sorts for buildings.

Cley, red and white.

A briefe Note of the sending another barke
this present yeere 1602, by the honourable
 knight, Sir WALTER RALEGH,
 for the searching out of his
 Colonie in *Virginia.*

Amuel Mace of Weimouth, a very sufficient
 Mariner, an honest sober man, who had bene
 at Virginia twice befoze, was imploied thi-
 ther by Sir Walter Ralegh, to finde those peo-
 ple which were left there in the yeere 1587.
 To whose succour he hath sent five severall
 times at his owne charges. The parties by him set forth,
 perfozmed nothing; some of them following their owne pro-
 fit elsewhere; others returning with frivolous allegations.
 At this last time, to auoid all excuse, he bought a barke, and
 hired all the company for wages by the moneth: who depar-
 ting from Weimouth in March last 1602, fell soztie leagues
 to the Southwestward of Hatarask, in thirtie foure degrées
 or thereabout; and hauing there spent a moneth; when they
 came along the coast to seeke the people, they did it not, pre-
 tending that the extremitie of weather and losse of some prin-
 cipall ground-sackle, forced and feared them from searching
 the port of Hatarask, to which they were sent. From that
 place where they abode, they brought Sassafras, Radix
 Chine or the China root, Benjamin, Cassia lignea, & a
 kinde of a tree more strong than any spice as
 yet knowne, with diuers other com-
 modities, which hereafter in
 a larger discourse may
 come to light.

A Treatise, conteining important inducements
for the planting in these parts, and finding a passage
that way to the South sea and *China*.

The voiage which we intend, is to plant Chri-
stian people & religion vpon the Northwest
countreies of America, in places temperat and
well agreeing with our constitution, which
though the same do lie betwæne 40 & 44 de-
grees of latitude, vnder the Paralels of Italie
& France, yet are not they so hot; by reason that the suns heat
is qualified in his course ouer the Ocean, befoze he arriueth
vpon the coasts of America, attracting much vapour from the
sea: which mitigation of his heat, we take for a benefit to vs
that intend to inhabit there; because vnder the Climat of 40
degrées, the same would be too vehement els for our bodies to
endure.

Temperate
Climats.

These lands were neuer yet actually possessed by any Chri-
stian prince or people, yet often intended to be by the French
nation, which long sithence had inhabited there, if domestical
warres had not withheld them: notwithstanding the same
are the rightfull inheritance of her Maiestie, being first disco-
uered by our nation in the time of King Henrie the seuenth,
vnder the conduct of Iohn Cabot and his sonnes: by which
title of first discouery, the kings of Portugall and Spaine doe
holde and enioy their ample and rich kingdomes in their Ia-
dies East and West; and also lately planted in part by the
Colonies sent thither by the honourable knight, Sir Walter
Raleigh.

Her Maiesties
title.

The course vnto these countreys, is thow the Ocean, al-
together free from all restraint by foren princes to be made;
whereunto othe our accustomed trades are subiect; apt for
most winds that can blow, to be perfozmed commonly in 30

A commodi-
ous and safe
course.

- or 35 daies. The coast faire, with safe roads and harbours for
 Rivers. Ships: Many rivers.
- Fertile lands. These lands be faire and pleasant, resembling France, in-
 termeddled with mountaines, valleys, medowes, woodlands,
 and champians. The soile is exceeding strong, by reason it
 was neuer manured; and will be therefore most fit to beare
 Rape-olles. Rape-seeds, Hempe, Flax, and whatsoeuer els requi-
 reth such strong soile. Rape-oiles, and all sorts of oiles, will
 be very commodious for England, which spendeth oiles a-
 bundantly about Clothing and Leather-dressing. In like
 sort, Hempe and Flax are profitable, whether the same be
 sent into England, or wrought there by our people; And also
 will grow there aswell or better then in Terçera.
- Dies. The Salvages weare faire colours in some of their attire,
 whereby we hope to find rich dies and colours for painting.
 The trees are for the most part, Cedars, Pines, Spruce,
 Firre, and Oaks to the Southward. Of these trees will be
 drawn Tarre and Pitch, Rosen, Turpentine, and Soap-
 ashes. They will make masts for the greatest shippes of the
 world Excellent timbers of Cedar, and woods for curious
 buildings.
- Minerals. The cliffes upon the coasts and mountaines euery where
 Copper. shew great likelihood of Minerals. A very rich mine of Cop-
 per is found, whereof I haue sene proofe; and the place de-
 scribed. Not farre from which there is a great hope also of a
 Silver mine. There be faire quarries of Stone, of beautifull
 colours, for buldings.
- Grapes. The ground bringeth forth without industrie, Pease, Ro-
 ses, Grapes, Hempe, besides other plants, fruits, herbs and
 flowers, whose pleasant view and delectable smells, doe de-
 monstrate sufficiently the fertilitie and sweetnesse of that
 soile and aire.
- Beasts. Beasts of many kindes; some of the bignesse of an Ore,
 whose hides make good Wolfe: Deere, both red and of other
 sorts in abundance: Luzerns, Martens, Sables, Beavers,
 Beares, Otters, Moleues, Foxes, and Squirrels, which to
 the Southward are blacke, and accounted very rich furs.
- Fowles. Fowles both of the water and land, infinit sorte and vari-
 etie; Watks both short and long winged, Partridges in a
 abundance,

bundance, which are very great, and easily taken. Birds great and small, some like unto our Blacke-birds, others like Canarie-birds: And many (aswell birds as other creatures) strange and differing from ours of Europe.

Fish, namely, Codds, which as we encline moze unto the South, are moze large and vendible for England and France, than the Newland fish. Whales and Seales in great abundance. Oiles of them are rich commodities for England, whereof we now make Soape, besides many other uses. Item, Tunneys, Anchoues, Bonits, Salmons, Lobsters, Diflers having Pearle, and infinit other sorts of fish, which are moze plentifull upon those Southwest coasts of America, than in any parts of the knowen world. Salt is reported to be found there, which els may be made there, to serue sufficiently for all fishing.

So as the commodities there to be raised both of the sea and land (after that we have planted our people skillfull and industrious) will be, Fish, Whale and Seale oiles, Soape as Oyes and Soape, Tarre and Pitch, Rosen and Turpentine, Waxes, Timber and booyds of Cedars, Firres, and Pines, Hemp, Flaxe, Cables and Ropes, Saile-clothes, Grapes, and Raisens and Wines, Coyne, Rape-seeds & oiles, Hides, Skinnes, Fures, Dyes and Colours for painting, Pearle, Mettals, and other Minerals.

Commodities
in generall.

These commodities befoze rehearsed, albeit for the most part they be grosse, yet are the same profitable for the State of England specially, aswell in regard of the use of such commodities, as for the imploiment also of our people and ships; the want whereof, both decay our townes and ports of England, and causeth the realme to swarme full with poore and idle people.

Imploiment
of our people,
and repairing
decayed ports.

These commodities in like sort, are of great use and estimation in all the South and Westerne countreys of Europe; namely, Italie, France and Spaine: for the which all nations that haue bene accustomed to repaire unto the Newfoundland for the commoditie of fish and oiles alone, will henceforward forsake the Newfoundland, and trade with vs, when once we haue planted people in those parts: by whose industrie shall be provided for all commers, both fish and oiles,

The trade to
Newfound-land
shalbe reuiued
used to vs.

A Treatise touching the planting

and many commodities besides, of good importance & value. **Spanish commodities.** Then will the Spaniards and Portugals bring unto vs in exchange of such commodities before mentioned, Wines, Sweet oiles, fruits, Spices, Sugars, Silks, Gold and Silver, or whatsoever that Europe yeeldeth, to supply our necessities, and to increase our delights.

English commodities. For which Spanish commodities and other sorts likewise, our merchants of England will bring unto vs againe, Cloth, Cattell, for our store and breed; and every thing els that we shall need, or that England shall haply exchange for such commodities.

Use of our Cloth. By this intercourse, our habitations will be made a Staple of all vendible commodities of the world, and a meanes to vent a very great quantitie of our English cloth into all the cold regions of America extended very farre.

Intercourse will soone be had with other nations. This intercourse also will be soone drawn together by this reason: That nere adjoining vpon the same coasts of Newfoundland, is the greatest fishing of the world; whither doe yearly repaire about 400 sailes of ships, for no other commodity than fish and Whale-oiles. When forasmuch as merchants are diligent inquisitours after gaines, they will soone remove their trade from Newfoundland vnto vs nere at hand, for so great increase of gaine as they shall make by trading with vs. For whereas the voyage vnto the Newfoundland is into a more cold and intemperate place, not to be traded nor frequented at all times, not fortified for securitie of the ships and goods, oft spoiled by pirats or men of warre; the charges great for salt; double manning and double victualling their ships, in regard that the labor is great and the time long, before their lading can be made readie: they carry outwards no commodities nor freight; and after sixe moneths voyage, their returne is made but of fish and Oiles.

In commodities in the Newfoundland trade.

Commodities by having trade with vs.

Contrariwise, by trading with vs at our intended place, the course shall be in a maner as short; into a more temperate and healthfull climat; at all times of the yeere to be traded; harbors fortified to secure ships and goods; charges abridged of salt, victualling and manning ships double: because lading shall be provided vnto their hands at a more easie rate than themselves could make it. They shall carry freight also out-
ward

ward, to make exchange with vs; and so get profit both waies: and then every foure moneths they may make a voyage and returne, of both fish and oiles, and many other commodities of good worth.

These reasons advisedly weighed, shall make our enterprise appeare easie, and the most profitable of the world, for our nation to undertake. The reasons we chiefly relie vpon, are these: namely,

1. Those lands which we intend to inhabit, shall minister unto our people, the subiect and matter of many notable commodities.
2. England shall afford vs people both men, women and children about 10000, which may very happily be spared from hence to work those commodities there.
3. Newfound-land shall minister shipping to carrie away all our commodities, and to bring others vnto vs againe for our supplic.

Now two of these reasons are already effected vnto our hands: that is to say: The place where we shall finde rich commodities, and ships to vent them. It remaineth onely for our parts, to carrie and transport people with their provisions from England, where the miserie and necessitie of manie crye out for such helpe and reliefe.

An easie enterprise, and great reward.

This considered, no nation of Christendom is so fit for this action as England, by reason of our superfluous people (as I may terme them) and of our long domestickall peace. And after that we be once 200 men strong, victualled and fortified, we can not be remoued by as many thousands.

The English nation most fit for discoveries.

For besides that, we haue seene both in France and the Low-countries, where 200 men well fortified and victualled, haue kept out the forces both of the French & Spanish kings, euen within their owne kingdoms: it shall be also a matter of great difficulty, to transport an army ouer the Ocean with victuals and munition, and afterwards to abide long siege abroad, against vs fortified within, where the very elements and famine shall fight for vs, though we should lie still and defend onely.

A Treatise touching the planting

The Saluages
are unable to
defend or
offend.

The Saluages neither in this attempt shall hurt vs, they being simple, naked and unarmed, destitute of edge-tooles or weapons; whereby they are unable either to defend themselves or to offend vs: neither is our intent to prouoke, but to cherish and win them vnto Christianitie by faire meanes; yet not to trust them too far, but to prouide against all accidents.

Then to conclude, as we of all other nations are most fit for a discovery and planting in remote places; euen so, vnder the heauens there is no place to be found so conuenient for such a purpose; by reason of the temperature, commodities, apt site for trade, & repaire thither already of so many ships, which in any other vnfrequented countrey, can not be procured in a mans age, nor with expence of halfe a million.

This action
but set on foot,
will goe for-
ward of it
selfe.

So as the onely difficultie now, is in our first preparation to transport some few people at the beginning; the charges whereof shall be defraied by our first returne of fish and some commodities of Sassafras, Hides, Skinnes and Furres, which we shall also haue by trading with the Saluages. The prouise of which commodities shall encourage our merchants to venter largely in the next. The supplie shall easily and continually be sent by ships, which yearly goe from hence vnto the Newfound-land and vs; and the intercourse & exchange we shall haue with all nations repairing thither, shall store vs with abundance of all things for our necessities and delights. Which reasons, if they had bene foresene of them that planted in the South part of Virginia (which is a place destitute of good harbours, and farre from all trade) no doubt but if they had settled nearer vnto this frequented trade in the Newfound-land, they had by this time bene a very flourishing State, and plentifull in all things; who also might then haue made way into the bowels of that large continent, where assuredly we shall discover verie goodly and rich kingdomes and cities.

Overlight in
choise of a new
habitation.

A matter of
importance
for England.

It may also seeme a matter of great consequence for the good and securitie of England; that out of these Northern regions we shall be able to furnish this realme of all maner of provisions for our nauies; namely, Pitch, Rosen, Cables, Ropes, Halls, and such like; which shall be made within those her Maiesties owne dominions, by her owne subjects,
and

and brought hither the way to the Ocean, free from restraint of any other prince; whereby the customes and charges bestowed by our merchants (to the enriching of foreign States) shall be lessened, and turned to the benefit of her Highnesse and her deputies in those parts: which also shall deliuer our merchants from many troubles & molestations which they now unwillingly indure in our East trades; and shall make vs the lesse to doubt the malice of those States whom now we may not offend, lest we should be intercepted of the same provisions, to the weakening of our nauie, the most roiall defence of this noble realme.

Of a conuenient passage and trade into the
South Sea, vnder temperate regions, part by
rivers, and some part ouer land, in
the continent of *America*.

I will adde hereunto an allured hope (grounded vpon infallible reasons) of a way to be made, part ouer land, & part by rivers or lakes, into the South seas vnto Cathay, China, and those passing rich countreys, lying in the East parts of the world: which way or passage (supposed to be beyond the vttermoost boundes of America, vnder the frozen Zone) is neuerthelesse, held by the opinion of many learned writers and men of iudgement now liuing, to be in these moze temperate regions; and that the same shall neuer be made knowne, vnlesse we plant first; whereby we shall learne as much by inquisition of the naturall inhabitants, as by our owne navigations. I will not herein relie vpon reports made in the French mens discoueries; that the sea which giueth passage vnto Cathay, extendeth from the North, nere vnto the riuer of Canada, into 44 degrees, where the same of the Saluages is called Tadouac.

Neither vpon the discoueries of Iaques Noel, who having passed beyond the three Straits, where Iaques Cartier left to discouer, finding the riuer of S. Laurence passable on the other side or branch; and afterwards, vnderstand of the inhabitants that the same riuer did leade into a mightie lake, which at

A Treatise touching the planting

the entrance was fresh, but beyond, was bitter or salt; the end whereof was unknown.

Omitting therefore these hopes, I will ground my opinion upon reason and nature, which will not faile.

For this we know already, that great rivers have been discovered a thousand English miles into that continent of America; namely, that of S. Laurence or Canada. But not regarding miles more or lesse, most assuredly, that and other known rivers there, doe descend from the highest parts or mountaines, or middle of that continent, into our North sea. And like as those mountains do cast from them, streames into our North seas; even so the like they do into the South sea, which is on the backe of that continent.

A large course of a river thorough a mightie continent, produceth a portable river.

For all mountaines haue their descents toward the seas about them, which are the lowest places and proper mansions of water: and waters (which are contained in the mountaines, as if were in cisternes) descending naturally, doe alwaies resort vnto the seas inuironing those lands: for example; From the Alps confining Germanie, France, and Italie, the mightie river Danubie doth take his course East, and dischargeth into the Pontique sea: the Rhine, North, and falleth into the Germane sea: the Rhosne, West, and goeth into the Mediterran sea: the Po, South, is emptied into the Adriaticke or gulfe of Venice. Other instances may be produced to like effect in Africk; yea, at home amongst the mountaines in England.

Seeing then in nature this can not be denied, and by experience elsewhere is found to be so, I will shew how a trade may be disposed more commodiously into the South sea thorough these temperate and habitable regions, than by the frozen Zones in the supposed passages of North-west or North-east: where, if the very moment be omitted of the time to passe, then are we like to be frozen in the seas, or forced to Winter in extreme colde and darkenesse like vnto hell: or in the midst of Summer, we shalbe in perill to haue our ships ouerwhelmed or crusht in pieces by hideous and fearefull mountaines of yce floating vpon those seas.

Therefore foure Staple-places must be erected, when the most short and passable way is found: that is to say, two vpon

on the North part of *Virginia*.

Upon the South side, at the head and fall of the riuer; and two others on the South side, at the head and fall also of that other Riuer.

Provided, that ships may passe by those riuers vnto the Staples, so farre as the same be nauigable into the land; and after wards, that boats with flat bottomes may also passe so high and nere the heads of the riuers vnto the Staples, as possibly they can, euen with lesse than two foot water, which can not then be far from the heads; as in the riuer of Chagre.

That necke or space of land betwene the two heads of the said riuers, if it be 100 leagues (which is not like) the commodities from the South and from the South sea brought thither, may wel be carrid ouer the same upon horses, mules or beasts of that countrey apt to labour (as the elke or buffel) or by the aid of many Saluages accustomed to burdens; who shall stand vs greatly in these affaires.

It is mozeouer to be considered, that all these countreys do yeeld (so farre as is knowen) Cedars, Pines, Firre trees and Oaks, to build, mast, and yeard ships; wherefoze we may not doubt, but that ships may be builded on the South sea.

When as ships on the South side may goe and returne so and from Cathay, China, and other most rich regions of the East world in five moneths or thereabouts; euen so the goods being carried ouer vnto the South side, ships may come thither from England to fetch the same goods, and returne by a voyage of foure or five moneths vsually.

So as in euery foure moneths may be returned into England the great riches of Cathay, China, Iapan, and the rest, which will be Spices, Dugges, Muske, Pearle, Stones, Gold, Siluer, Silks, Clothes of gold, & all maner of precious things, which shall recompense the time and labour of their transportation and carriage, if it were as farre and dangerous as the Moyses trade is from Fes and Marocco (ouer the burning and moreable sands, in which they perish many times, and suffer commonly great distresses) vnto the riuer called Niger in Africa, and from thence, by the said riuer mane hundred miles; after wards ouer-land againe, vnto the riuer Nilus; and so vnto Cairo in Egypt, from whence they returne the way they came.

A Treatise touching the planting, &c.

¶ If it were a voyage so farre as our merchants haue
 made into Persia, euen to Ormus, by the way of the North,
 through Russia into the Caspian sea, and so south, with pay-
 ment of many tolles. But this passage ouer and thow the
 continent of America, as the same shall be allwaies vnder
 temperate and habitable climats; and a pleasant passage, af-
 ter it hath bene a little frequented; euen so it must fall out
 much shorter than it seemeth, by false description of that con-
 tinent, which doth not extend so farre into the West, as by
 later nauigations is found and described in more ex-
 quit charts. Besides that, the sea extends it selfe
 into the land very farre in many places on
 the South side; whereby our accesse
 vnto the South ocean, shall
 be by so much, the
 shorter.
